## Summary

Computer Science Student skilled in **end-to-end web** & **mobile development** using **MVC architecture** with **Java, Python, JavaScript, Bootstrap, HTML/CSS, SQL**. Experienced in **OOP** and **Test-Driven Development (JUnit)** to build reliable, scalable applications. Strong collaborator with a team-first mindset, disciplined focus on achieving goals, and an eagerness to learn

## Education

**Honours Bachelor of Science in Computer Science**, York University, Toronto    Expected Oct 2027

**Relevant Coursework:** Algorithms, Data Structures, Database Systems, Advanced OOP, User Interfaces

## Relevant Projects

**Bank Mobile App**

- Implemented a **Java-based application** using **OOP** and **MVC architecture**, relying on the foundation of **automated JUnit Testing** for **efficient debugging, development,** and **problem-solving**
- Operated with **Android Studio** to implement **UI** with **10+ components** (buttons, drop down menus, and input fields)
- Created controller logic to facilitate **view** & **logic interaction** and attached control methods to **UI components**, demonstrating **MVC architecture**
- Incorporated **5 core services** (account creation, deposit, withdraw, transfer, statement generation)
- Integrated **robust input validation** by providing the **most relevant error** out of **10+ error cases** through a priority chain

**Website Portfolio (includes demo videos of projects)**

- Utilized **Bootstrap Framework**, **HTML** to create **5 responsive pages** across different screen sizes via **30+ responsive breakpoints** to ensure **cross-platform compatibility**
- Developed **reusable UI components** (navigation bar, footer) to ensure **maintainability**
- Applied **Javascript** and **CSS** to implement **dynamic UI behavior**, improving **content visibility** (e.g. navigation bar transitions based on scroll events)
- Built contact page to provide 5 fields with **input validation** feedback to user with **Bootstrap** styling

**Video Game**

- Built an interactive application in **Python** using **OOP**, modelling dynamic entities and system behavior
- Utilized **PyGame API** to build and integrate visual and logical components (**7 vehicles**, progress bar, simulating experience of driving on **UI**)
- Developed **4 termination scenarios** involving **collision detection** with user and bot vehicles, crossing upper and lower window boundaries, and victory
- Implemented **dynamic creations** of **bot vehicles** and a **dynamic** bot **pathing algorithm** to optimize user engagement, simulating complex system workflows

## Technical Skills

**Languages**: Java, Python, HTML, CSS, Javascript, SQL, C, Bash, RISC-V

**Other**: Android Studio, Bootstrap, JUnit Testing, Azure, Relational Databases (MSSQL), Figma, Linux, GitHub

## Volunteering

**Merchandiser Volunteer** **August 2019**
Salvation Army Thrift Store

- Utilized a tagging gun to code **50+ books** on shelves independently based on **specific conditions** such as degraded quality or barcode values, and removed them into a cart
- Removed **75+** misplaced items from shelves into a cart and sorted them onto their appropriate shelves
- Organized **100+ shelf products** to maintain **aesthetic appearance** on shelves

**Packager Volunteer** **August 2019**
University of Toronto

- Packed **8000+ student orientation kits** with student supplies in a **fast-paced environment** through **constant communication** and **teamwork** with **100+ volunteers**
- Collaborated with **100+ volunteers** to dispose of **8000+ recyclable by-products** after packing
- Transported **8000+ student orientation kits** via carts and re-located **1600+ supply boxes** for packing alongside **100+ volunteers**

## Awards

**Computer Studies Award (Python)**, Tommy Douglas Secondary School, Vaughan, ON 2019
